CANDIDATE'S OVERVIEW

- 5 years of work experience in hands-on manual testing of Smart TV, web, desktop and mobile applications
- Experience in FinTech (banking), Insurance, and OTT domains
- Experience in functional, regression, cross-platform, acceptance, documentation testing and others that are assumed in project
- Experience in working with software testing related documentation (test results reports, testing status reports, test metrics, test cases, checklists, bug reports)
- Experienced in using TestRail, Postman, and Charles for testing purposes, with a foundational knowledge of SQL and version control using Git
- Strengths in organizing the scope of work, planning, prioritizing
- Interested in learning new tools, technologies, and testing practices
- Extremely motivated and committed to deliver the highest standard of work with a high sense of responsibility
- Great communication and problem-solving skills

PROFESSIONAL EXPERIENCE

■ Enterprise-Grade OTT Solution to 5 Different Platforms

Project Overview

A cross-platform OTT solution with customized frontend applications for 5 different devices, including LG- and Samsung-based smart TVs, Android, iOS, and web. The solution supports a wide array of engaging features such as an easy-to-use EPG, download-to-go, recent TV archive, continuous watching across devices, and smart content recommendations. Users can create several profiles per household and connect up to 5 different devices.

Position

QA Engineer

Team Size: 24

Achievements

- Unblocked testing during backend downtime by implementing API checks and mocking/stubbing via Charles Proxy (Breakpoints, Map Local)
- Led release readiness and regression phases, coordinating cross-functional fixes and providing authoritative QA sign-off for production deployments

Responsibilities

- Execute all types of testing that are assumed in project test activities, such as functional, regression, cross-browser/-platform, mobile, localization, etc.
- Execute test scenarios and create bug reports, if problems are found
- Design, create and support test documentation such as test suites, checklists, test cases and others that are assumed in project
- Analyze existed testing process and customize testing approaches / perform enhancements
- Track all existing problems and risks, and inform project team about them to ensure their resolution before project release
- Participate in the scope estimations (story points / hours)
- Perform demo of the product to the customer / stakeholders

Key Technologies

iOS, Swift, iOS Bolts, Viper, PlayKit (Kaltura Player, AVPlayer), Realm, Kingfisher, Swinject, JavaScript, REST API testing, Charles Proxy, Postman

Payroll, HR & Insurance Processing System

Project Overview

A desktop application developed to automate time-consuming internal processes, including payroll calculations, personnel accounting, tax calculations, and reporting to government agencies. The system also supported insurance-related operations such as voluntary contributions, child insurance, illness coverage, and other insurance scenarios, ensuring accurate calculations and reporting for various business cases.

Position

QA Engineer

Team Size: 20

Responsibilities

- Execute all types of testing that are assumed in project test activities, such as functional, regression, cross-browser/-platform, mobile, localization, etc.
- Design, create and support test documentation such as test suites, checklists, test cases and others that are assumed in project
- Test insurance-related business logic, including the calculation of contributions and payouts
- Validate diverse insurance scenarios and business rules
- Verify the accuracy of financial and payroll calculations
- Execute test scenarios and create bug reports, if problems found
- Track all existing problems and risks, and inform project team about them to ensure their resolution before project release
- Participate in bug refinement sessions
- Participate in the scope estimations (story points / hours)

Key Technologies

Postman, TestRail, Atlassian Jira, Test Cases, Test Reports, Swagger UI (web services), Atlassian Confluence, Postman, REST API testing, Basic MySQL, DevTools

Corporate Mobile Banking & Digital Portal

Project Overview

A secure and feature-rich mobile banking application for legal entities (businesses, corporations, organizations) alongside a complementary corporate website. This solution aims to provide a seamless, efficient, and modern digital banking experience tailored to the complex financial needs of corporate clients.

Position

QA Engineer

Team Size: 5

Responsibilities

- Execute all types of testing that are assumed in project test activities, such as functional, regression, cross-browser/-platform, mobile, localization, etc.
- Execute test scenarios and create bug reports, if problems found
- Design, create and support test documentation such as test suites, checklists, test cases and others that are assumed in project
- Track all existing problems and risks, and inform project team about them to ensure their resolution before project release
- Participate in the scope estimations (story points / hours)

Key Technologies

TeamCity, Atlassian Confluence, Atlassian Jira, Test Cases, TestRail
